

Meeting summary for SLCC-Atari Zoom Meeting 7pm (10/30/2024)

In attendance: Kevin, Bob, Garrett, Don, Ronald Devine, Mariono and John

- Short meeting and was postponed from Tuesday
- Talked about Mariono's new I9 14000 computer. It does have 2 sticks of ram for a total of 32gb
- Garrett is still working with HAM radio but is using shorter wave. 900mhz. This need an older computer from the late 90's to sue the bit-banged method those computers used for serial ports.
- John showed and spoke about his computer the he cools by having it submerged in a engineered non-conductive solution with a fish tank as his case.
- Don showed a picture of the simulated train system he has been working on for a number of years.
- Bob was tired from his 2 week in Japan, and did not talk much.
- Ron shows an Atari 8-bit 3.5" floppy drive he just purchased. It has a SIO cable installed in the back. It needs TopDos to work well, but he has not yet fully tested the drive. It has a switch so it can be connected to a PC.
- Next week's in-person meeting will also be delayed 1 day, if the library will let us, due to the Election.
